

HealthWeb

Introduction-

We are excited to present to you our project(UPES/Hack/9)- HealthWeb, which is an all-in-one website that helps users find their BMI, nutrition intake, BMR and all the information that they need to know to stay fit. In this work from home scenario, HealthWeb is the perfect website to promote healthy eating and maintaining good physique. It is a fully responsive website and is made for all kinds of devices and web browsers.

Platform and resources used-

We have used HTML5, CSS3, Javascript, bootstrap and some other libraries for making this website.

All the images in this website are open source and royalty free.

For icons, we have used " font awesome" library.

Software -

VScode with live server

For opening the website-

Download the HealthWeb folder and then open index.html

Note- Fonts and libraries require constant internet access to work properly.
